Tower 121, 6th Floor, Zone No. 66, Street No. 100, Building No. 121
Doha, State of Qatar P.O. Box 3747

Dear Hiring Manager,

I am writing to express my strong interest in the Qatar Shell Summer Internship, as advertised on the Shell Qatar careers website. As an Electrical Engineering student at Hamad Bin Khalifa University with a growing focus on power systems and clean energy, I would welcome the chance to spend the summer learning what engineering at Shell looks like from the inside. My combination of programming and machine learning research, hands-on electrical work in the field, and a strong academic record positions me to contribute to a Qatar Shell team while gaining the structured, real-world exposure this internship is designed to provide.

A particularly formative moment in my engineering journey came when my programming professor recruited me to join his undergraduate research team at the Kurban Intelligence Lab after noticing my work in his programming course. Working with him, I am exploring how artificial intelligence and machine learning can be applied to problems in electrical engineering. Alongside this, I was also recruited for a UREP research project on photovoltaic systems under another faculty member, deepening my technical understanding of renewable energy generation. Together, these two experiences give me strong knowledge of areas directly relevant to Shell's work. Still, I am applying for this internship because I want to develop the practical skills that only a real engineering environment like Qatar Shell can offer. Also, I have worked as an electrical assistant, supporting a professional electrician in installation and maintenance jobs in the field, which has already given me a feel for working under real-world conditions, and I am ready to build on that foundation this summer.

Beyond the technical aspect, I am personally drawn to Shell. Earlier this year, I had the privilege of visiting the Shell Eco-marathon in Qatar 2026 and joining a behind-the-scenes tour led by your Chemical Engineer, Mr. Majid Samarah. Seeing how Shell brings together young engineers, sustainable mobility, and serious technical problem-solving in one place left a lasting impression on me. What impressed me most was how openly Shell engineers shared their work and experiences with us as students, and how clearly they enjoyed what they do. That day convinced me that Shell is a place where engineers are trusted to think, build, and grow, and it is the kind of environment I want to start my career in.

I am confident that my technical foundation, hands-on experience, and genuine motivation make me a strong fit for this internship. I would welcome the opportunity to discuss how I can contribute to your team this summer and can be reached at the phone number or email listed above at your convenience. Thank you for your time and for considering my application.

Sincerely,

Youssef Abou Ali

Qatar Shell Internship Experience

The Qatar Shell Internship Experience offers a real and supportive entry into professional life, helping you learn, explore, build confidence, and make meaningful progress.

Looking for a Career at Shell?

Search for a job

Discover life at Qatar Shell

Choosing a career path is easier when you've seen a workplace from the inside.

The Qatar Shell Summer Internship is a paid summer experience for university students who want to understand what working at Shell is really like – our culture, our people, and the types of challenges we work on every day.

This internship is designed as an **exploration and learning experience**. It gives you the opportunity to spend time in a real Shell environment, observe how teams work together, and build confidence before making future career decisions.

About the Qatar Shell Internship Experience

This summer internship is designed to give you a first, realistic look into professional life at Qatar Shell.

- **Duration:** 6–8 weeks
- **Timing:** Summer (June – August)
- **Location:** Ras Laffan & Doha
- **Type:** Paid summer internship
- **Applications open:** March 2026

Is this internship for you?

This internship is designed for Qatari Engineering students who are:

- Curious about the energy industry
- Early in their career journey
- Looking for practical exposure alongside their university studies

You might still be deciding what kind of engineer you want to be – or whether the energy industry is right for you. This programme is intended to help you explore those questions in a supportive way.

You can apply if you:

- Are a **Qatari National**
- Are enrolled in **Year 2, 3 or 4** of a university degree
- Are studying **Engineering** (for example: Mechanical, Chemical, Electrical, Industrial & Systems)
- Have a **minimum GPA of 2.5** (or equivalent)

What you will experience

During the **6–8-week programme**, you will join a Qatar Shell team and experience day-to-day working life in a structured and supportive environment.

During the internship, you will:

- Spend time shadowing professionals across specific areas across engineering, technology, or maintenance.
- Work on one clearly scoped micro-project, linked to real business activity
- Observe how teams collaborate, communicate and make decisions
- Develop confidence in a professional workplace You will be supported by:
- A **business supervisor**
- A **buddy** for day-to-day questions
- Regular check-ins to help you reflect on what you are learning

What you might work on

Each intern is assigned **one micro-project** that reflects the work of their team and helps bring their learning together.

Examples include:

- Observing and mapping a technical or operational process
- Supporting a workflow review and identifying improvement ideas
- Creating an observation log and sharing recommendations

You will also take part in:

- Safety and business inductions
- Informal learning sessions that explain how interviews and case studies work at Shell, to build awareness and confidence

At the end of the internship, interns share their learning and receive a certificate of completion.
